Kelowna BC, V1V 1V8

Dear Hiring Manager,

I would like to present my application for the WealthSimple Intern, Software Development role. As a fourth-year standing Bachelor of Science student majoring in Computer Science and minoring in Data Science, I am passionate about working in collaborative environments to create scalable, high-impact software solutions. Wealthsimple's innovative use of microservice architecture, focus on agile methodologies, and commitment to building a high-performing, inclusive culture align closely with my aspirations and values. I would love to contribute to a team that delivers exceptional financial products through this role. Enrolled in the Co-op program at UBC's Okanagan campus, I am available for 4, 8, or 12-month terms starting in May of 2025.

I have hands-on experience in designing and developing full-stack applications, with strong technical skills in JavaScript/TypeScript, Python, and SQL, alongside frameworks like React and Node.js. I have worked extensively with cloud-based services using Fly and Vercel, and I am well-versed in Git for version control and CI/CD workflows. I thrive in agile environments where I can take ownership of projects, collaborate with teams, and tackle complex challenges. These experiences align perfectly with your requirements.

In my recent projects, I contributed to two impactful software solutions that highlight my technical and collaborative abilities. In a team of 3, I helped develop the Makerspace YK Management System, an automated membership management platform that optimized user data tracking, payment processing, and scheduling for over 1,000 members for the non-profit organization. Leveraging Prisma and PostgreSQL for the backend and Remix with Tailwind CSS for the frontend, I delivered a user-friendly system that improved operational efficiency and streamlined member onboarding. Additionally, I contributed development to LearnCoding, an adaptive e-learning platform benefiting over 500 students at UBC. I implemented Matomo Analytics to track user behavior, integrated the UBC Canvas API for seamless compatibility, and secured access controls for 60+ faculty members using PHP and MySQL. Both projects demanded a combination of technical proficiency, problem-solving, and strong communication skills, which I am eager to bring to the WealthSimple Intern, Software Development role.

I am confident that my previous experience, projects, academic background, and passion for the technology will serve me well in this position, and would like to restate the interest I have in software development and the vision you have for continuous deployment, shipping frequently, and fostering debate and inclusivity to improve product outcomes. I would love to enjoy having the opportunity to discuss the other things I can contribute to WealthSimple. Thank you for your consideration.

Sincerely,
Ariq
